

AMAZON SALES PERFORMANCE ANALYSIS (2022)

DATA ANALYSIS CASE STUDY USING
EXCEL,SQL,R,TABLEAU

Prepared by:Suzain khan

Role:Analyst intern

Tools Used:Excel|SQL|R|Tableau

Date:Febrauary 2026

EXECUTIVE SUMMARY

Project Overview

This project analyzes Amazon sales data for the year 2022 to identify revenue trends, high-performing product categories, order status distribution, and state-wise sales performance. The objective is to generate business insights that support data-driven decision-making using Excel, SQL, R, and Tableau.

Key Findings

- The Set category generated the highest revenue (₹339K), followed by **Kurta (₹181K)**.
- Most revenue came from Shipped orders (~₹472K), indicating strong order fulfillment performance.
- Maharashtra and Karnataka were the top-performing states in terms of revenue.
- A small portion of orders were Cancelled or Returned, representing potential improvement areas.

Tools & Methodology

The analysis was conducted using:

- Microsoft Excel (Pivot Tables & Charts)
- SQL (Data extraction & aggregation queries)
- R Programming (Data visualization & statistical analysis)
- Tableau (Interactive dashboard creation)

Business Impact

This analysis helps:

- Identify top revenue-generating products
- Understand regional sales performance
- Monitor order fulfillment efficiency
- Support strategic business decisions

INTRODUCTION

This case study analyzes Amazon sales performance data for the year 2022 to evaluate revenue distribution, product performance, order fulfillment efficiency, and regional sales trends.

With increasing competition in the e-commerce industry, businesses must rely on data-driven insights to optimize operations, improve customer satisfaction, and increase profitability.

This analysis was conducted using Excel, SQL, R, and Tableau to extract insights from structured sales data and present them through interactive visualizations and dashboards.

Figure 1

BUSINESS PRIORITIES

- Increase customer satisfaction by 2%
- Maintain growth

“PROJECT OBJECTIVES”

Identify top-performing product categories

- Analyze revenue distribution across states
- Evaluate order status performance (Shipped, Delivered, Cancelled, Returned)
- Detect revenue concentration trends
- Create a professional interactive dashboard for business reporting

PROJECT OBJECTIVES

- Analyze revenue distribution across product categories to identify high-performing segments.
- Evaluate state-wise sales performance to determine top revenue-generating regions.
- Examine order status trends to understand fulfillment efficiency.
- Identify revenue leakage caused by cancellations and returns.
- Develop data-driven business recommendations to improve overall sales performance.

TOOLS & TECHNOLOGIES USED

- Microsoft Excel – Data cleaning, Pivot Tables, Pivot Charts
- SQL (MySQL) – Data querying and aggregation
- R Programming – Data visualization and analysis
- Tableau – Interactive dashboard creation
- Microsoft Word – Report documentation

DATASET OVERVIEW

- Dataset: Amazon Sales Data (2022)
- Records: 30,000+ transactions
- Key Fields: Category, Ship-State, Order Status, Amount
- Currency: Indian Rupees (₹)

RECOMMENDATIONS

- Increase inventory and marketing for high-performing categories such as Set and Kurta
- Improve cancellation and return management processes
- Focus marketing campaigns in top-performing states like Maharashtra and Karnataka
- Expand promotion efforts in low-performing regions
- Use dashboards regularly for monthly performance monitoring

PROJECT TYPE

- Business Intelligence & Sales Performance Analysis

KEY INSIGHTS FROM DASHBOARD

- Set category generates the highest revenue (₹339K), followed by Kurta (₹181K).
- A large portion of revenue comes from Shipped orders (₹472K).
- Cancelled and returned orders indicate revenue leakage.
- Maharashtra and Karnataka are among the top-performing ship states.
- Revenue is highly concentrated in 2–3 major categories.

Amazon Sales Performance Dashboard(2022)

Revenue by category

Revenue by Order Status

Revenue by ship-state

BUSINESS INTERPERETATION

The dashboard indicates that overall revenue is heavily driven by a small number of high-performing categories and successfully fulfilled (Shipped) orders. A significant concentration of revenue in limited categories suggests dependency risk. Additionally, cancelled and returned orders represent potential revenue leakage and operational inefficiencies. Improving order fulfillment processes, reducing return rates, and strategically expanding high-demand product categories can enhance revenue stability and long-term growth.

STRATEGIC RECOMENDATION

- Reduce cancellation and return rates through better quality control and order tracking.
 - Focus marketing and inventory investment on high-performing categories (Set, Kurta).
- Expand presence in top-performing states like Maharashtra and Karnataka.
 - Diversify revenue streams to reduce dependency on limited categories.

CONCLUSION

This project analyzed Amazon Sales Performance (2022) using Excel, SQL, R, and Tableau to derive meaningful business insights.

The analysis identified revenue concentration in specific categories, highlighted fulfillment efficiency trends, and detected revenue leakage due to cancellations and returns.

Strategic recommendations were proposed to improve operational efficiency, strengthen high-performing segments, and reduce dependency risks.

Overall, this project demonstrates how data-driven decision-making can enhance business performance and long-term growth.
