

SALES PERFORMANCE ANALYSIS REPORT

Store sales data analysis using SQL & Excel

February 2026

OVERVIEW

1. Project background and description

This project analyzes store sales data using SQL and Excel to identify revenue trends, regional performance, and top-selling products. The objective was to extract meaningful business insights from transactional sales data and evaluate overall sales performance.

The analysis focuses on total revenue generation, product demand, regional contribution, and monthly sales trends.

2. Project scope

The scope of this project includes:

- Data cleaning and preparation in Excel
 - Writing SQL queries to analyze sales performance
 - Calculating total revenue using $\text{Quantity} \times \text{Unit Price}$
 - Analyzing revenue by region
 - Identifying best-selling products
 - Evaluating monthly sales trends
-

3. Methodology

The following steps were followed in this project:

- Imported sales dataset into SQLite database
 - Cleaned and verified data in Excel
 - Wrote SQL queries to analyze performance
 - Grouped and aggregated data using SUM and GROUP BY
 - Extracted monthly sales trends using date
-

4. Deliverables

Structured sales dataset (Excel file)
SQL query file (sales_analysis.sql)
README documentation
Sales Performance Analysis Report

5. Key Findings

-Identified the region generating highest revenue
-Determined best-selling products based on total quantity sold
-Calculated total store revenue
-Analyzed monthly sales trends

6. Tools Used

-SQL
-Microsoft Excel
-Visual Studio Code

7. Conclusion

This project demonstrates practical application of SQL for analyzing business sales data. It provides valuable insights into revenue trends, regional performance, and product demand, supporting data-driven business decisions.

PROJECT INFORMATION

Field	Details
Project Name	Sales Performance Analysis
Name	Suzain Masood Khan
Role	Data Analyst
Tools Used	SQL(SQLite), Microsoft Excel, VS Code
Submission Date	February 2026
